Asclepias curassavica

Edward F. Gilman

Introduction

Butterfly weed is a member of the milkweed family native to Florida, and by some reports, the only Asclepias that does consistently well in south Florida (Fig. 1). The plant can be grown as an annual flower or as a perennial. The plants grow to two- to four-feet-tall and flower from spring until fall. The flower colors are red and orange borne in clusters at the top of the plant. Butterflies can usually be seen flying around the plant and visiting the flowers.

General Information

Scientific name: Asclepias curassavica
Pronunciation: ass-KLEE-pee-us kur-uh-SAV-ick-uh
Common name(s): Butterfly-Weed, Milkweed, Silkweed
Family: Asclepiadaceae
Plant type: herbaceous; annual
USDA hardiness zones: 4 through 10 (Fig. 2)
Planting month for zone 7: Jun; Jul
Planting month for zone 8: May; Jun; Jul; Aug
Planting month for zone 9: Mar; Apr; May; Jun; Jul; Aug; Sep
Planting month for zone 10 and 11: Feb; Mar; Apr; May; Jun; Jul; Aug; Sep; Oct; Nov; Dec
Origin: not native to North America
Uses: naturalizing; cut flowers; attracts butterflies; mass planting
Availability: somewhat available, may have to go out of the region to find the plant

Description

Height: 1 to 2 feet
Spread: 1 to 2 feet
Plant habit: round; upright
Plant density: moderate
Growth rate: fast
Texture: medium
**Figure 2.** Shaded area represents potential planting range.

**Foliage**

**Leaf arrangement:** alternate  
**Leaf type:** simple  
**Leaf margin:** entire  
**Leaf shape:** oblong  
**Leaf venation:** parallel  
**Leaf type and persistence:** deciduous  
**Leaf blade length:** 4 to 8 inches  
**Leaf color:** green  
**Fall color:** not applicable  
**Fall characteristic:** not applicable

**Flower**

**Flower color:** red; yellow  
**Flower characteristic:** summer flowering; spring flowering

**Fruit**

**Fruit shape:** unknown  
**Fruit length:** unknown  
**Fruit cover:** unknown  
**Fruit color:** unknown  
**Fruit characteristic:** inconspicuous and not showy

**Trunk and Branches**

**Trunk/bark/branches:** not applicable  
**Current year stem/twig color:** green  
**Current year stem/twig thickness:** thick

**Culture**

**Light requirement:** plant grows in full sun  
**Soil tolerances:** acidic; slightly alkaline; sand; loam; clay  
**Drought tolerance:** high  
**Soil salt tolerances:** poor  
**Plant spacing:** 18 to 24 inches

**Other**

**Roots:** not applicable  
**Winter interest:** no special winter interest  
**Outstanding plant:** plant has outstanding ornamental features and could be planted more  
**Invasive potential:** may self-seed each year
**Pest resistance:** very sensitive to one or more pests or diseases which can affect plant health or aesthetics

**Use and Management**

As plants age and become somewhat woody near the base of the plant, cut them back to stimulate new growth near the bottom. This will help them look good for many years.

The best sites have exposure to sun or partial shade and almost any soil. Butterfly weed is slow to start growth in the spring. Mark its location in hardiness zones 8 and parts of 9 before the plant disappears in the winter to prevent damage to easily injured dormant crowns. A deep root (taproot) reportedly makes transplanting difficult. Once established do not disturb butterfly weed unnecessarily. Occasional fertilization can help keep flowers coming nearly all year long.

Aphids may infest Butterfly Weed.

**Pests and Diseases**

- Leaf spot diseases are seen but not serious.
- Rusts cause the formation of reddish colored spots.
- Cucumber mosaic virus causes leaf mottling but no chemical control is available.
