**Introduction**

This slow-growing, woody, evergreen vine has thick, fleshy, two to four-inch-long, green or variegated leaves, and produces in spring and summer large, round, hanging clusters of creamy white to light pink, 0.5-inch, fragrant flowers, each with a perfect five-pointed pink star in the center (Fig. 1). Bloom fragrance is subtle and you must come close to the plant to enjoy it but it is well worth the effort. These long-lasting, showy blooms emerge on old flower spurs, which should never be pruned off. Because Wax Plant is especially sensitive to nematodes, plants are often grown in containers where the soil can be carefully controlled. Wax Plant is very susceptible to temperatures below 40-degrees F. and should be used in sheltered locations.

**General Information**

- **Scientific name:** Hoya carnosa
- **Pronunciation:** HOY-yuh kar-NOE-suh
- **Common name(s):** Wax Plant, Wax Flower
- **Family:** Asclepiadaceae
- **Plant type:** vine
- **USDA hardiness zones:** 10B through 11 (Fig. 2)
- **Planting month for zone 10 and 11:** year round
- **Origin:** not native to North America
- **Uses:** hanging basket; suitable for growing indoors; cascading down a wall
- **Availability:** grown in small quantities by a small number of nurseries

**Description**

- **Height:** depends upon supporting structure
- **Spread:** depends upon supporting structure
- **Plant habit:** spreading
- **Plant density:** open
- **Growth rate:** slow
- **Texture:** medium

**Use and Management**

Wax Plant should be grown in partial shade in a fibrous, well-drained, acid potting medium, such as compost, peat, or sphagnum moss. Plants should be allowed to dry between deep waterings in the summer months then, after flowering, plants should be allowed to become dormant by very infrequent waterings during the cool months. This plant is well-suited for growing in a container with an extremely well-drained media where stems can cascade over the side and show off the waxy foliage and unusual bloom.

Available cultivars include: ‘Variegata’, white-margined leaves; ‘Exotica’, leaves variegated with yellow and pink, margined with green; and ‘Krinkle Kurl’ or Hindu-Rope Plant, leaves crowded, curled, and contorted.

Propagation is by cuttings or layering.

Nematodes and mealy-bugs.

**Pests and Diseases**

Root-rots if kept too wet.
