Introduction

The Fiddle-leaf Morning Glory is a herbaceous vine that is native to the southeastern United States (Fig. 1). This plant, unlike the Beach Morning Glory, can be grown throughout Florida and along coast. It attains a height of 4 to 6 inches but can spread along the ground to a distance of 75 feet. The small, thick, glossy green leaves are ovate-cordate in shape and densely cover the stems. Most leaves are divided into 5 lobes in a more or less star shape. This plant roots and branches at the nodes and spreads very rapidly. The white, funnel-shaped flowers of the Fiddle-leaf Morning Glory are generally 2 ½ to 3 inches wide. They open in the early morning and close before noon each day during the blooming season; the flowers are borne in the summer and fall. Small, round seedpods that contain four velvety, dark-brown seeds appear on this plant after flowering.

General Information

Scientific name: *Ipomoea stolonifera*

Pronunciation: ipp-oh-MEE-uh stoe-law-NIFF-fur-uh

Common name(s): Fiddleleaf Morning-Glory

Family: Convolvulaceae

Plant type: ground cover

USDA hardiness zones: 8 through 11 (Fig. 2)

Planting month for zone 8: year round

Planting month for zone 9: year round

Planting month for zone 10 and 11: year round

Origin: native to Florida

Uses: ground cover

Availability: somewhat available, may have to go out of the region to find the plant

Description

Height: depends upon supporting structure

Spread: depends upon supporting structure

Plant habit: spreading; prostrate (flat)

Plant density: moderate

Figure 1. Fiddleleaf Morning-Glory.
Ipomoea stolonifera -- Fiddleleaf Morning-Glory

Figure 2. Shaded area represents potential planting range.

Growth rate: fast
Texture: coarse

Foliage

Leaf arrangement: alternate
Leaf type: simple
Leaf margin: lobed
Leaf shape: elliptic (oval)
Leaf venation: pinnate
Leaf type and persistence: evergreen
Leaf blade length: 2 to 4 inches
Leaf color: green
Fall color: no fall color change
Fall characteristic: not showy

Flower

Flower color: white
Flower characteristic: summer flowering; fall flowering

Fruit

Fruit shape: round
Fruit length: less than .5 inch
Fruit cover: dry or hard
Fruit color: unknown
Fruit characteristic: inconspicuous and not showy

Trunk and Branches

Trunk/bark/branches: not applicable
Current year stem/twig color: green
Current year stem/twig thickness: thick

Culture

Light requirement: plant grows in full sun
Soil tolerances: acidic; alkaline; sand; loam;
Drought tolerance: high
Soil salt tolerances: good
Plant spacing: 24 to 36 inches
Other

Roots: not applicable
Winter interest: plant has winter interest due to unusual form, nice persistent fruits, showy winter trunk, or winter flowers
Outstanding plant: not particularly outstanding
Invasive potential: aggressive, spreading plant
Pest resistance: no serious pests are normally seen on the plant

Use and Management

*Ipomoea stolonifera* is well adapted to beaches and coastal dunes. It is most useful as a sandbinder in coastal landscapes. This vine is an excellent coastal ground cover and will also provide a screen or shelter if it is given a support, such as a trellis, to climb upon. Plant on 3-feet-centers to quickly form a ground cover. It may not be well suited for home landscapes because it grows too quickly and has a very open growth habit.

This plant will flourish in full sun on well-drained, sandy soils. It is very tolerant of drought and salt air. The Fiddle-leaf Morning Glory is a rapidly growing plant and requires frequent pruning.

Pests and Diseases

No pests or diseases are of major concern.
