Magnolia x soulangiana ‘Alexandrina’

Edward F. Gilman

Introduction

Young Japanese or Saucer Magnolia are distinctly upright, becoming more oval, then round by 10 years of age (Fig. 1). Blooms open in late winter in the southern part of its range to early spring in the northern part of its range before the leaves emerge. Flowers on ‘Alexandrina’ are among the prettiest of the Magnolias. Petals are pink on the outside, whitish-pink inside. Even young trees can develop a beautiful flower display. However, a late frost can often ruin the flowers in all areas where it is grown. In warmer climates, the late-flowering selections avoid frost damage but some are less showy than the early-flowered forms which blossom when little else is in flower.

General Information

Scientific name: Magnolia x soulangiana ‘Alexandrina’
Pronunciation: mag-NO-lee-uh x soo-lan-jee-AY-nuh
Common name(s): ‘Alexandrina’ Saucer Magnolia
Family: Magnoliaceae
Plant type: tree
USDA hardiness zones: 5 through 9A (Fig. 2)
Planting month for zone 7: year round
Planting month for zone 8: year round
Planting month for zone 9: year round
Origin: not native to North America
Uses: near a deck or patio; container or above-ground planter; espalier
Availability: generally available in many areas within its hardiness range

Description

Height: 20 to 25 feet
Spread: 15 to 25 feet
Plant habit: upright; round
Plant density: open
Growth rate: moderate
Texture: coarse
**Foliage**

- **Leaf arrangement:** alternate
- **Leaf type:** simple
- **Leaf margin:** undulate
- **Leaf shape:** obovate
- **Leaf venation:** pinnate
- **Leaf type and persistence:** deciduous
- **Leaf blade length:** 4 to 8 inches
- **Leaf color:** green
- **Fall color:** yellow
- **Fall characteristic:** showy

**Flower**

- **Flower color:** white; pink
- **Flower characteristic:** spring flowering; summer flowering

**Fruit**

- **Fruit shape:** irregular
- **Fruit length:** 1 to 3 inches
- **Fruit cover:** dry or hard
- **Fruit color:** red

**Fruit characteristic:** rarely fruits

**Trunk and Branches**

- **Trunk/bark/branches:** no thorns; typically multi-trunked or clumping stems
- **Current year stem/twig color:** brown
- **Current year stem/twig thickness:** medium

**Culture**

- **Light requirement:** plant grows in part shade/part sun
- **Soil tolerances:** clay; sand; loam; acidic;
- **Drought tolerance:** moderate
- **Soil salt tolerances:** unknown
- **Plant spacing:** 36 to 60 inches

October 1999
Other

Roots: usually not a problem  
Winter interest: plant has winter interest due to unusual form, nice persistent fruits, showy winter trunk, or winter flowers  
Outstanding plant: plant has outstanding ornamental features and could be planted more  
Invasive potential: not known to be invasive  
Pest resistance: long-term health usually not affected by pests

Use and Management

The tree is best used as a specimen in a sunny spot where it can develop a symmetrical crown. It develops an open canopy but flowers fine in a partially shaded spot. It can be pruned up if planted close to a walk or patio to allow for pedestrian clearance but probably looks its best when branches are left to droop to the ground. The light gray bark shows off nicely, particularly during the winter when the tree is bare.

Transplant in the spring, just before growth begins, and use balled and burlapped or containerized plants. Pruning wounds may not close well, so train plants early in their life to develop the desired form to avoid large pruning wounds.

Pests and Diseases

It is generally pest free, but scales of various types may infest twigs and foliage. Magnolia may be subject to leaf spots. Canker diseases will kill entire branches.
