Use and Management

It looks particularly attractive twining along a fence or over an arbor or mailbox. Foliage and flowers cluster toward the top of the fence or arbor several years after planting. Regular heading back of the twining stems each year will help generate new foliage and flowers near the ground. Rapid growth and profuse flowering have helped Allamanda become popular as an annual in cooler regions where freezing temperatures kill the plant to the ground.

Growing best in full sun, Allamanda needs well-drained soil and should receive ample moisture during the growing season. Flowers appear in greatest abundance during the summer but some appear all year.

Pests and Diseases

No pests or diseases are of major concern. Plants are occasionally bothered by scale and mealybugs.

Culture

Light requirement: plant grows in full sun
Soil tolerances: slightly alkaline; clay; sand; acidic; loam;
Drought tolerance: moderate
Soil salt tolerances: poor
Plant spacing: 36 to 60 inches

Other

Roots: not applicable
Winter interest: plant has winter interest due to unusual form, nice persistent fruits, showy winter trunk, or winter flowers
Outstanding plant: plant has outstanding ornamental features and could be planted more
Invasive potential: not known to be invasive
Pest resistance: no serious pests are normally seen on the plant
