**Introduction**

This is one of the finest-textured Maiden Grass cultivars (Fig. 1). The base of the long, flexible leaves stand mostly erect, but the tips droop under their own weight forming a fountain-like sculpture in the landscape. Slender leaves originate in a clump, spreading out and up like a fountain. The 5 to 6-foot-tall clumps bear pink flowers in late summer and fall which can be used for drying or as a dye plant. Their pinkish or silvery 8- to 10-inch-long plumes persist into the winter. Foliage is flexible and blows easily in the wind. This shrub-like grass turns to a rich gold or orange in the south in the fall; fall color in northern landscapes appears more as a tannish-brown. The fall color lasts through the winter.

**General Information**

*Scientific name:* Miscanthus sinensis ‘Gracillimus’  
*Pronunciation:* miss-KANTh-us sye-NE-sis  
*Common name(s):* ‘Gracillimus’ Maiden Grass  
*Family:* Gramineae  
*Plant type:* herbaceous; ornamental grass  
*USDA hardiness zones:* 6 through 9 (Fig. 2)  
*Planting month for zone 7:* year round  
*Planting month for zone 8:* year round  
*Planting month for zone 9:* year round  
*Origin:* not native to North America  
*Uses:* mass planting; border; container or above-ground planter; screen; accent  
*Availability:* generally available in many areas within its hardiness range

**Description**

*Height:* 5 to 6 feet  
*Spread:* 5 to 10 feet  
*Plant habit:* upright  
*Plant density:* moderate  
*Growth rate:* fast  
*Texture:* fine

Figure 2. Shaded area represents potential planting range.

Foliage

Leaf arrangement: alternate
Leaf type: simple
Leaf margin: serrate
Leaf shape: lanceolate
Leaf venation: parallel
Leaf type and persistence: deciduous
Leaf blade length: more than 36 inches
Leaf color: green
Fall color: brown or tan
Fall characteristic: showy

Flower

Flower color: red; white
Flower characteristic: summer flowering; fall flowering

Fruit

Fruit shape: no fruit
Fruit length: no fruit
Fruit cover: no fruit
Fruit color: no fruit

Fruit characteristic: no fruit

Trunk and Branches

Trunk/bark/branches: typically multi-trunked or clumping stems
Current year stem/twig color: not applicable
Current year stem/twig thickness: not applicable

Culture

Light requirement: plant grows in full sun
Soil tolerances: occasionally wet; acidic; sand; loam; clay; slightly alkaline
Drought tolerance: moderate
Soil salt tolerances: poor
Plant spacing: 36 to 60 inches
Other

**Roots:** not applicable

**Winter interest:** plant has winter interest due to unusual form, nice persistent fruits, showy winter trunk, or winter flowers

**Outstanding plant:** plant has outstanding ornamental features and could be planted more

**Invasive potential:** aggressive, spreading plant

**Pest resistance:** no serious pests are normally seen on the plant

**Use and Management**

Maiden Grass is frequently used in the landscape as a specimen or screen. It is also employed in group plantings forming a nice mass of fine-textured foliage. Use Maiden Grass as an accent or mass planted in a large-scale landscape, such as around a commercial building to add a touch of soft elegance and texture. The slightest breeze moves the foliage allowing the landscape to ‘come alive’. Many people prefer to cut the grass back to the ground in the spring so new green growth is not covered with last year’s dried, brown foliage.

Maiden Grass requires a location in the landscape that receives full sun, but it is adaptable to most well-drained soils. This ornamental grass is quite drought tolerant. It is a warm season grass and transplants best in the spring. Provide good drainage at the planting site.

Other cultivars include: ‘Condensatus’, coarser leaf texture than species, mid-summer bloom, 7 to 8 feet tall; ‘Purpureascens’, reddish foliage in summer, purple-red foliage in fall, silver pink inflorescence, mid-summer bloom, 4 to 5 feet tall; ‘Silver Feather’, silvery white flowers in mid-summer; ‘Strictus’, horizontal yellow bands on foliage, upright growth habit, 6 to 8 feet tall; ‘Variegatus’, white variegation on leaf margin, does relatively well in partial shade, to 7 feet tall; ‘Yaku Jima’, more compact, 3 to 4 feet tall; ‘Zebrinus’, horizontal yellow bands on foliage, wide spreading habit, to 7 feet tall.

The propagation of Miscanthus sinensis is by division in the spring.

**Pests and Diseases**

No pests or diseases are of major concern. Rust diseases occasionally infest the foliage but it often goes away in drier weather.
