**Nymphaea x ‘Trudy Slocum’**

Edward F. Gilman

**Introduction**

This night blooming, Tropical Waterlily is a hybrid that floats its foliage and produces a fragrant, multipetaled, pure white flower well above the water (Fig. 1). Like other night blooming Tropical Waterlilies, full sun and at least 4 to 6 feet is needed to spread its leaves on the waters surface. Each leaf lasts about 6 weeks before turning yellow. This is normal and should not be cause for concern. Flowers open in the evening and stay open until about noon the following day. This allow you to enjoy the flowers when flowers on other waterlilies have closed for the day. Flower showiness is legendary and each flower lasts several days. Full sun is essential.

**General Information**

**Scientific name:** Nymphaea x ‘Trudy Slocum’  
**Pronunciation:** nim-FEE-uh  
**Common name(s):** ‘Trudy Slocum’ Tropical Waterlily  
**Family:** Nymphaeaceae  
**Plant type:** aquatic plant  
**USDA hardiness zones:** 10 through 11 (Fig. 2)  
**Planting month for zone 10 and 11:** year round  
**Origin:** not native to North America  
**Uses:** cut flowers; attracts butterflies  
**Availability:** somewhat available, may have to go out of the region to find the plant

**Description**

**Height:** .5 to 1 feet  
**Spread:** 2 to 4 feet

Foliage

Leaf arrangement: most emerge from the soil, usually without a stem
Leaf type: simple
Leaf margin: dentate
Leaf shape: orbiculate
Leaf venation: palmate
Leaf type and persistence: evergreen
Leaf blade length: 8 to 12 inches
Leaf color: green
Fall color: no fall color change
Fall characteristic: not showy

Flower

Flower color: white
Flower characteristic: pleasant fragrance; summer flowering; fall flowering; spring flowering

Fruit

Fruit shape: unknown
Fruit length: unknown
Fruit cover: unknown
Fruit color: unknown
Fruit characteristic: inconspicuous and not showy

Trunk and Branches

Trunk/bark/branches: not applicable
Current year stem/twig color: not applicable
Current year stem/twig thickness: not applicable

Culture

Light requirement: plant grows in full sun
Soil tolerances: acidic; grows submerged in water
Drought tolerance: 
Soil salt tolerances: poor
Plant spacing: 36 to 60 inches
Other

**Roots:** not applicable  
**Winter interest:** no special winter interest  
**Outstanding plant:** plant has outstanding ornamental features and could be planted more  
**Invasive potential:** not known to be invasive  
**Pest resistance:** long-term health usually not affected by pests

Use and Management

Waterlilies grow in standing water about 18 inches deep and spread by means of rhizomes. They can be prevented from spreading by planting in a container without drainage holes and submerging the container into the water garden. This helps prevent the plant from invading the entire water garden.

Waterlilies should be planted in a container filled with garden soil or potting mix. A shallow and wide container shape is better than a tall, narrow container. The garden soil can be mixed with one-fifth well decomposed cow manure. Incorporate fertilizer at an equivalent rate of about one-quarter cup 10-10-10 per gallon of soil or media to help stimulate growth. Before filling the container, place a small plastic bag filled with sand at the bottom of the container to keep the container from floating in the pond. Plant the rhizome at the edge of the container so it can grow horizontally across the top. Place a 1- or 2-inch layer of sand or gravel over the top of the media after the rhizome is planted in the pot to keep media and soil in the container. Lower the container into 6 inches of water until growth begins. Then it can be set so the bottom is no more than 18 inches below the surface. If the water is too deep, place a brick or concrete block under the container. Do not construct containers from treated lumber since growth could be severely inhibited.

The only maintenance required is monthly application of a slow release fertilizer. Tablets manufactured by various companies can be placed several inches below the sand or gravel layer at the top of the container. Follow the manufacturers directions to determine appropriate number of tablets.

There are many other night bloomers in shades of white, pink and red.
