Rhododendron canescens

Edward F. Gilman

Introduction

Pink Pinxter Azalea is well-noted for its vivid display of pink or white, fragrant, clustered blooms appearing in spring, before the new leaves emerge (Fig. 1). Well-suited to mass plantings in natural woodland settings, Piedmont Azalea makes a traffic-stopping show whenever it is in full bloom.

General Information

Scientific name: Rhododendron canescens
Pronunciation: roe-duh-DEN-drun kuh-NESS-senz
Common name(s): Pink Pinxter Azalea, Florida Honeysuckle
Family: Ericaceae
Plant type: shrub
USDA hardiness zones: 6B through 10A (Fig. 2)
Planting month for zone 7: year round
Planting month for zone 8: year round
Planting month for zone 9: year round
Planting month for zone 10: year round
Origin: native to Florida
Uses: mass planting; specimen; container or above-ground planter; trained as a standard; attracts hummingbirds; attracts butterflies
Availability: somewhat available, may have to go out of the region to find the plant

Description

Height: 8 to 12 feet
Spread: 6 to 10 feet
Plant habit: oval; upright

Plant density: open
Growth rate: slow
Texture: fine

Foliage

Leaf arrangement: alternate
Leaf type: simple

Figure 1. Pink Pinxter Azalea.
Figure 2. Shaded area represents potential planting range.

Rhododendron canescens -- Pink Pinxter Azalea

Leaf margin: entire
Leaf shape: obovate
Leaf venation: pinnate
Leaf type and persistence: deciduous
Leaf blade length: 2 to 4 inches
Leaf color: green
Fall color: no fall color change
Fall characteristic: not showy

Trunk/bark/branches: not particularly showy; typically multi-trunked or clumping stems; can be trained to grow with a short, single trunk
Current year stem/twig color: brown
Current year stem/twig thickness: medium

Flower

Flower color: pink; white
Flower characteristic: spring flowering

Fruit

Fruit shape: elongated
Fruit length: .5 to 1 inch
Fruit cover: dry or hard
Fruit color: brown
Fruit characteristic: inconspicuous and not showy

Trunk and Branches

Leaf blade length: 2 to 4 inches
Leaf color: green
Fall color: no fall color change
Fall characteristic: not showy

Culture

Light requirement: plant grows in part shade/part sun
Soil tolerances: acidic; clay; loam; sand;
Drought tolerance: moderate
Soil salt tolerances: poor
Plant spacing: 36 to 60 inches

Other

Roots: usually not a problem
Winter interest: no special winter interest
Outstanding plant: plant has outstanding ornamental features and could be planted more
Invasive potential: not known to be invasive
Pest resistance: long-term health usually not affected by pests
**Use and Management**

These Azaleas are rather straggly and upright when very young but will spread out, the large, dark green leaves causing the branches to gently cascade down to the ground. A single specimen should be allowed at least four to five feet of spread to develop into its natural form.

Rich, moist, acid soil in light shade, receiving some direct sun, protected from harsh winds, is an ideal location for Pink Pinxter Azaleas. Azaleas grow best in filtered shade from tall trees. Plants are very sensitive to dry soil and the soil should drain freely. A thick (3 inches deep) mulch is recommended to help ensure adequate root growth. Roots are located in the top several inches, even in sandy, well-drained soil.

Pruning is seldom necessary except to control shoots that extend above the normally mounded shape. Since plants bloom on the previous year’s growth, any desired pruning should be done in spring after flowering. Pinching new shoots when they are several inches long increases branching and flower display.

Propagation is by seed sown in late fall on moist peat moss or by softwood cuttings taken in late spring.

No pests are of major concern other than mites.

**Pests and Diseases**

Problems include iron deficiencies from too high a soil pH and mushroom root rot in poorly-drained soil.
