Schaefferia frutescens¹

Edward F. Gilman²

Introduction

Florida Boxwood is usually found close to the tidewater area on sandy soil and hammocks (Fig. 1). Although large specimens can grow to 30-feet-tall, most are seen as small to medium-sized shrubs. Smallish leaves borne close together make the plant look similar to the well known Boxwood famous in English gardens. Leaves are yellow-green and rolled over slightly along the margins. Small, greenish white flowers are borne in the leaf axils in compact clusters. Fruits turn from green to yellow then bright red. The bark is smooth grey or brown. The yellow wood is used in boxes and for carving when it becomes available.

General Information

Scientific name: Schaefferia frutescens

Pronunciation: sheff-FEER-ree-uh froo-TESS-senz

Common name(s): Florida Boxwood

Family: Celastraceae Plant type: tree

USDA hardiness zones: 10B through 11 (Fig. 2) **Planting month for zone 10 and 11:** year round

Origin: native to Florida

Uses: reclamation plant; superior hedge; near a deck or patio; espalier; recommended for buffer strips around parking lots or for median strip plantings in the highway; screen; border

Availablity: somewhat available, may have to go out of the

region to find the plant

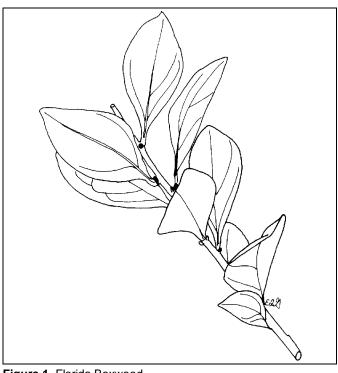

Figure 1. Florida Boxwood.

Description

Height: 15 to 25 feet Spread: 10 to 15 feet Plant habit: oval Plant density: dense Growth rate: fast Texture: fine

Foliage

Leaf arrangement: alternate

Leaf type: simple Leaf margin: entire Leaf shape: elliptic (oval) Leaf venation: pinnate

Leaf type and persistence: evergreen **Leaf blade length:** 2 to 4 inches

Leaf color: green

Fall color: no fall color change **Fall characteristic:** not showy

Flower

Flower color: greenish-white

Flower characteristic: spring flowering

Fruit

Fruit shape: round

Fruit length: less than .5 inch

Fruit cover: fleshy Fruit color: yellow

Fruit characteristic: persists on the plant

Trunk and Branches

Trunk/bark/branches: typically multi-trunked or clumping

stems; not particularly showy

Current year stem/twig color: green Current year stem/twig thickness: thin

Culture

Light requirement: plant grows in part shade/part sun **Soil tolerances:** well-drained; alkaline; sand; loam; clay;

Drought tolerance: high **Soil salt tolerances:** good **Plant spacing:** 36 to 60 inches

Other

Roots: usually not a problem

Winter interest: no special winter interest Outstanding plant: not particularly outstanding Invasive potential: not known to be invasive **Pest resistance:** long-term health usually not affected by pests

Use and Management

Florida Boxwood can be planted in a row to form a nice hedge or screen. It takes to clipping well making it suited for creating a formal appearance. Train the hedge wider at the bottom than the top to allow light to reach the bottom. This will help keep it dense. Larger plants can be trained into small, multi-trunked trees. Nursery operators can also train young plants into a standard with one trunk and a tight head of foliage. This is nicely suited for a formal landscape.

Florida Boxwood is well adapted to partial shade, making it a good candidate for planting along foundations and other areas receiving less than full day sun. It grows well in slightly alkaline soil.

Pests and Diseases

No problems appear to affect the growth or health of this plant.
