Verbena speciosa ‘Imagination’

Edward F. Gilman

Introduction

This verbena is a perennial well suited for Florida landscapes, especially those that receive infrequent irrigation. It won the All American Selections award in 1993. Deep violet-blue or purple flowers borne in clusters at the top of this 12-inch-tall ground cover stand out against the soft, fine-textured foliage. They cover the plant with purple. Stems creep along the ground and root to bind the soil together, helping prevent erosion.

General Information

Scientific name: Verbena speciosa ‘Imagination’

Pronunciation: ver-BEEN-nuh spee-see-OH-suh

Common name(s): ‘Imagination’ Verbena

Family: Verbenaceae

Plant type: perennial; herbaceous; ground cover

USDA hardiness zones: 10 through 11 (Fig. 1)

Planting month for zone 10 and 11: Feb; Mar; Apr; May; Jun; Jul; Aug; Sep; Oct; Nov; Dec

Origin: not native to North America

Uses: mass planting; ground cover; attracts butterflies; cascading down a wall; hanging basket

Availability: generally available in many areas within its hardiness range

Description

Height: 1 to 1.5 feet

Spread: 3 to 5 feet

Plant habit: spreading

Plant density: moderate

Growth rate: moderate

Texture: fine

Foliage

Leaf arrangement: opposite/subopposite

Leaf type: simple

Leaf margin: lobed

Leaf shape: variable

Leaf venation: pinnate

Leaf type and persistence: semi-evergreen; evergreen

Leaf blade length: less than 2 inches

Leaf color: green

Fall color: no fall color change

Fall characteristic: not applicable

Flower

Flower color: purple; violet-blue

Flower characteristic: flower season is longer in zones 9-11; spring flowering; summer flowering

Fruit

Fruit shape: unknown

Fruit length: unknown

Fruit cover: unknown

Fruit color: unknown

Fruit characteristic: inconspicuous and not showy

Trunk and Branches
Verbena speciosa ‘Imagination’ -- ‘Imagination’ Verbena

Trunk/bark/branches: not applicable
Current year stem/twig color: green
Current year stem/twig thickness: thin

Culture

Light requirement: plant grows in full sun
Soil tolerances: acidic; alkaline; sand; loam; clay;
Drought tolerance: high
Soil salt tolerances: unknown
Plant spacing: 24 to 36 inches

Use and Management

To establish a solid ground cover, plant about 4-feet apart. Stems creep along the soil and plants will form a complete cover 18 to 24 months after planting. Plant in the full sun for fastest growth and best flowering. Foliage remains dark green with little or no care once plants are established. Occasional fertilizer applications will help keep the foliage green and will promote flowering.

Verbena tenuisecta is very similar.

Pests and Diseases

Few problems should impact this Verbena.

Other

Roots: not applicable
Winter interest: no special winter interest
Outstanding plant: plant has outstanding ornamental features and could be planted more
Invasive potential: aggressive, spreading plant
Pest resistance: long-term health usually not affected by pests
