Brassica oleracea

Edward F. Gilman

Introduction

Ornamental Cabbage (Acephala group) does not make the tight head common on cabbages sold in the grocery store (Capitata group) (Fig. 1). Leaves on Ornamental Cabbage are edible but more showy than the Capitata group, and they are displayed in loose, showy rosettes. Veins are prominently displayed on the underside of the leaves. Leaf coloration patterns range from red and green, solid blue, to white and green. Good coloration is brought on by temperatures below 60 degrees F, hence the plant is used in the fall, winter and spring. Seed is available that reliably produces each of these leaf coloration patterns.

General Information

Scientific name: Brassica oleracea
Pronunciation: BRASS-ick-uh awl-lur-RAY-see
Common name(s): Flowering Kale, Ornamental Kale, Ornamental Cabbage
Family: Cruciferae
Plant type: annual; biennial
USDA hardiness zones: all zones (Fig. 2)
Planting month for zone 7: Oct; Feb; Mar
Planting month for zone 8: Nov; Dec
Planting month for zone 9: Dec; Jan; Feb
Planting month for zone 10 and 11: Dec; Jan; Feb
Origin: not native to North America
Uses: edging; attracts butterflies
Availability: generally available in many areas within its hardiness range

Description

Height: .5 to 1 feet
Spread: 1 to 1.5 feet
Plant habit: round
Plant density: dense
Growth rate: slow
Texture: coarse

**Foliage**

- **Leaf arrangement:** spiral
- **Leaf type:** simple
- **Leaf margin:** parted
- **Leaf shape:** orbiculate
- **Leaf venation:** pinnate
- **Leaf type and persistence:** not applicable
- **Leaf blade length:** 8 to 12 inches
- **Leaf color:** green; purple or red; variegated
- **Fall color:** not applicable
- **Fall characteristic:** not applicable

**Flower**

- **Flower color:** yellow
- **Flower characteristic:** showy

**Fruit**

- **Fruit shape:** unknown
- **Fruit length:** unknown
- **Fruit cover:** unknown
- **Fruit color:** unknown
- **Fruit characteristic:** inconspicuous and not showy

**Trunk and Branches**

- **Trunk/bark/branches:** usually with one stem/trunk
- **Current year stem/twig color:** not applicable
- **Current year stem/twig thickness:** not applicable

**Culture**

- **Light requirement:** plant grows in full sun
- **Soil tolerances:** acidic; slightly alkaline; sand; loam;
- **Drought tolerance:** moderate
- **Soil salt tolerances:** unknown
- **Plant spacing:** 12 to 18 inches

**Other**

- **Roots:** not applicable
- **Winter interest:** plant has winter interest due to unusual form, nice persistent fruits, showy winter trunk, or winter flowers
Outstanding plant: plant has outstanding ornamental features and could be planted more
Invasive potential: not known to be invasive
Pest resistance: long-term health usually not affected by pests

Use and Management

Cabbage can be used reliably as a bedding plant in the fall and spring throughout the deep south. Some die-back may occur in the coolest regions of the south and into North Florida in a very cold winter. It can be used throughout the winter in central and south Florida. When flowers begin to appear, it is time to remove the plants and replant with a more heat tolerant bedding plant.

With warm temperatures in central and south Florida, some cultivars may not provide the showiness desirable of Ornamental Cabbage except in the winter.

Pests and Diseases

Caterpillars can eat holes in the leaves. Although this does not kill the plant, it makes them unattractive.
