Fothergilla gardenii

Edward F. Gilman

Introduction

This 4- to 6-feet tall shrub covers itself with soft, white flowers each spring before leaves emerge (Fig. 1). It appears to be covered with snow when in full bloom. Bright red, orange or yellow fall color bring the shrub back to life before leaves fall to the ground.

General Information

Scientific name: Fothergilla gardenii
Pronunciation: faw-thur-GIL-luh gar-DEE-nee-eye

Leaf venation: pinnate
Leaf type and persistence: deciduous
Leaf blade length: 2 to 4 inches
Leaf color: green
Fall color: red; yellow
Fall characteristic: showy

Flower

Flower color: white
Flower characteristic: pleasant fragrance; spring flowering

Fruit

Fruit shape: irregular
Fruit length: less than .5 inch
Fruit cover: dry or hard
Fruit color: black
Fruit characteristic: inconspicuous and not showy

Trunk and Branches

Trunk/bark/branches: not particularly showy; typically multi-trunked or clumping stems
Current year stem/twig color: brown

Current year stem/twig thickness: thin

Culture

Light requirement: plant grows in part shade/part sun
Soil tolerances: acidic; loam; clay; sand;
Drought tolerance: moderate
Soil salt tolerances: unknown
Plant spacing: 36 to 60 inches

Other

Roots: usually not a problem
Winter interest: no special winter interest
Outstanding plant: plant has outstanding ornamental features and could be planted more
Invasive potential: native plant that often reproduces into nearby landscapes
Pest resistance: no serious pests are normally seen on the plant

Use and Management

The moderately small size makes this appropriate for planting in a residential landscape. It can be used in a shrub border to spice up the yard in spring and fall. Plant it near the corner of a large commercial building and leave it unpruned to allow the natural rounded form to emerge. It is also suited for planting along the foundation of the house provided the soil drains well. Clipping the plant can reduce flowering so locate it where it can grow to its natural size.

Fothergilla can be grown in any soil except those that are excessively drained. Plants suffer in extended drought, especially in full sun. An acidic clayey soil that holds moisture and drains well is ideal.

There are 5 or more cultivars listed with various growth habits, foliage patterns and fall color. *Fothergilla major* and *Fothergilla monticola* are larger plants.

Pests and Diseases

No pests or diseases are usually serious enough to be damaging.
